

将报表导出为多种格式

使用FlexViewer导出

使用FlexViewer控件，您可以预览和导出报表。报表可以导出为多种文件格式：.pdf, .html, .rtf, .docx, .xls, .xlsx, .zip, .tiff, .bmp, .png, .jpg和.gif。以下代码描述了如何使用ClFlexViewer类的Export方法导出FlexReport：

CS

```
//Load report definition
clFlexReport1.Load(@"reportFile", "reportName");

//Specify the report shown by the viewer
clFlexViewer1.DocumentSource = clFlexReport1;

//Export
clFlexViewer1.Export();
```

使用FlexReport导出为PDF

以下代码描述了如何使用PdfFilter类将FlexReport导出为PDF。同样，您也可以将报表导出为上述其他格式。

CS

```
//create report object
ClFlexReport clFlexReport1 = new ClFlexReport();

//Load a report
clFlexReport1.Load(@"..\..\ProductsReport.flxr", "Products Report");
clFlexReport1.Render();

//Create PdfFilter object
Cl.Win.ClDocument.Export.PdfFilter filter = new
Cl.Win.ClDocument.Export.PdfFilter();
filter.ShowOptions = false;

//Give file name and path where exported file will be saved
filter.FileName = "Products Report" + @"..\..\ProductsReport.pdf";
//The report is exported as ProductsReport.pdf in bin\debug folder

//Export
clFlexReport1.RenderToFilter(filter);
```
