

连接 XML 文件数据源

ActiveReports 支持XML数据源绑定，本文将重点介绍如何为RDL/页面报表和区域报表设置多数据源。

RDL/页面报表

1. 设置数据源

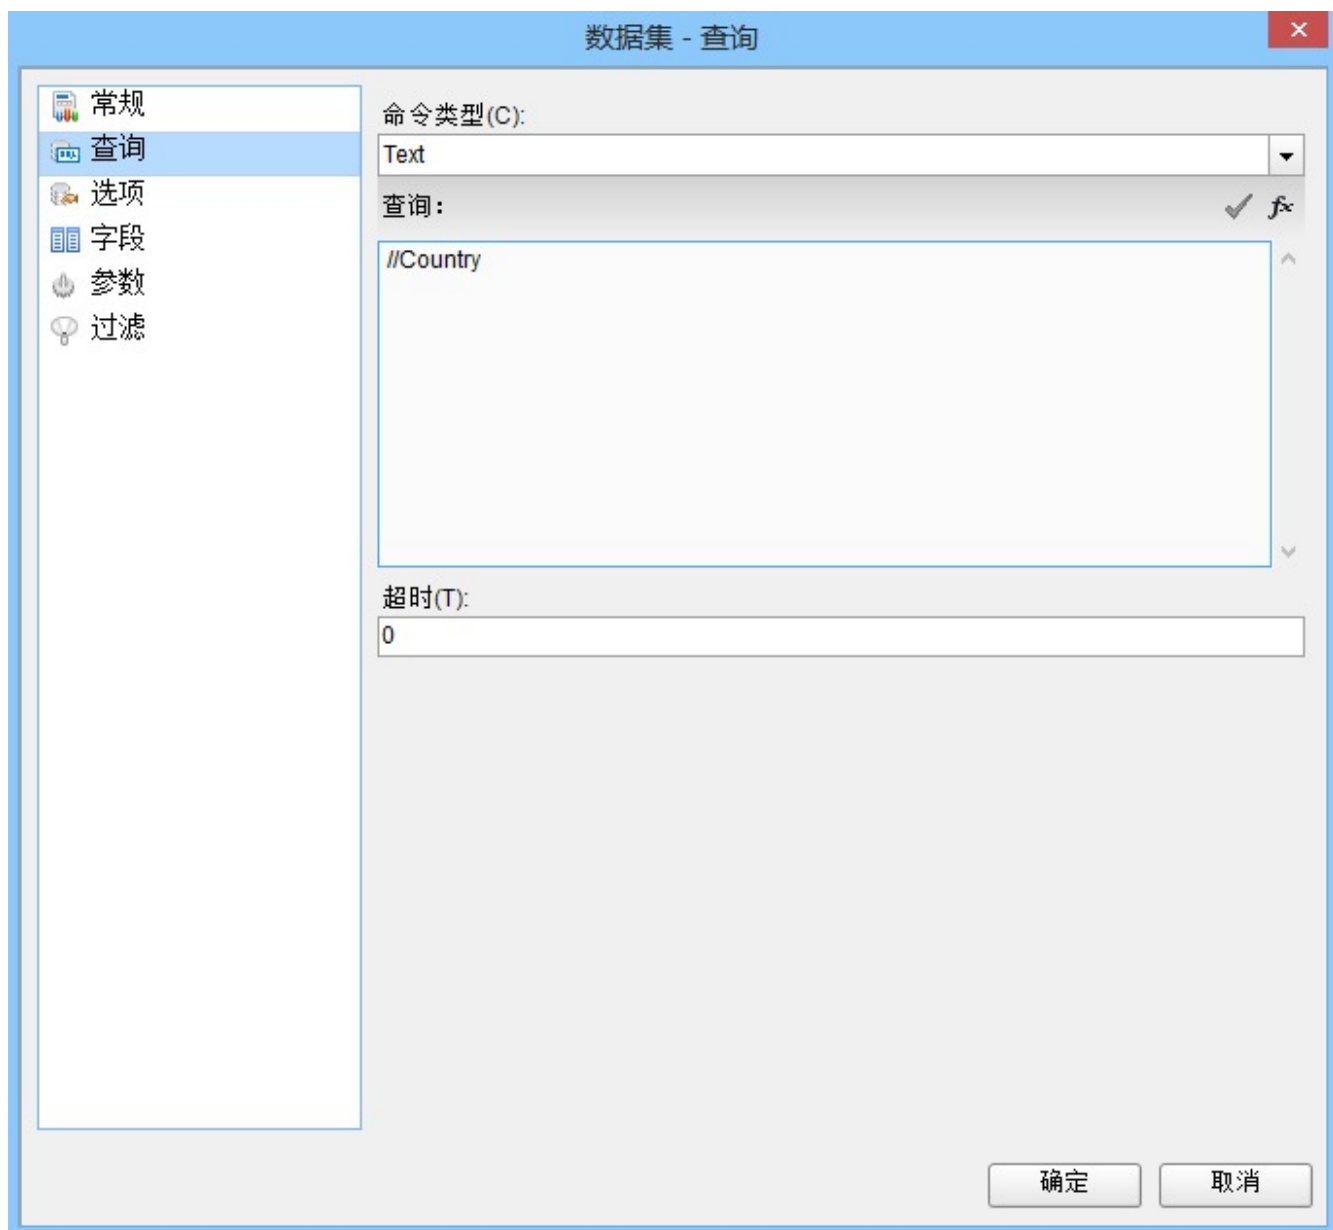

例如: XmlDoc=D:\AR_RDL_XML\CallCenter.xml

或者XmlDoc=CallCenter.xml

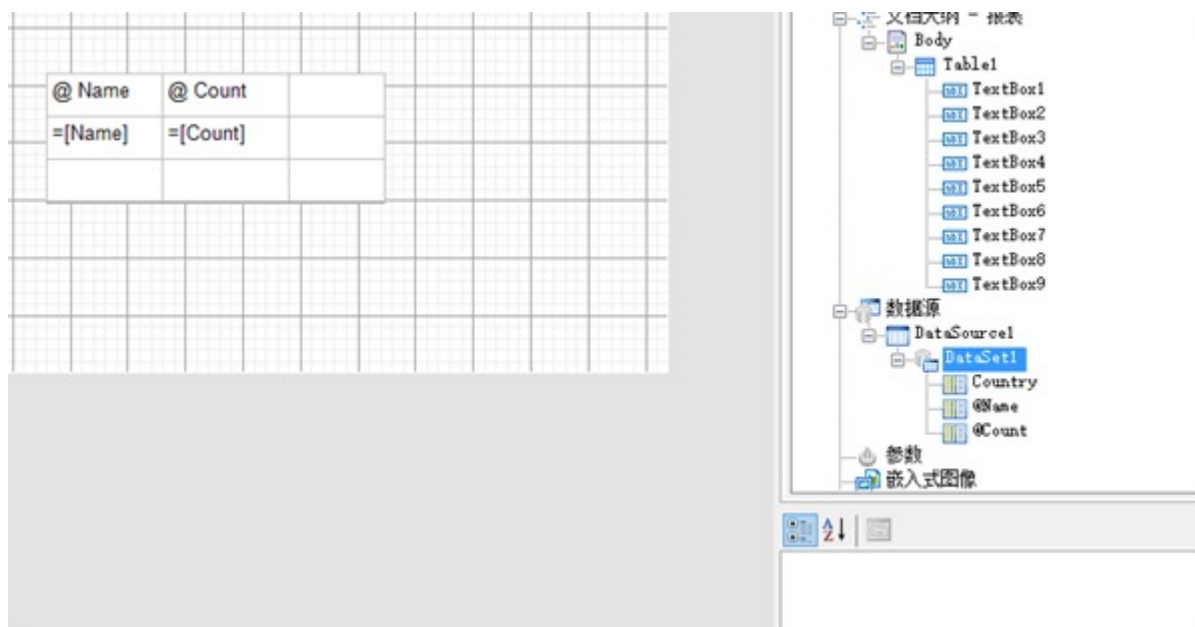

2. 数据源和报表可以使用相对路径

名称	修改日期	类型	大小
 CallCenter.xml	2015/7/29 17:39	XML 文件	9 KB
 CountrySales.rdlx	2015/9/29 9:23	RDLX 文件	1 KB
 Customer.xml	2015/7/29 17:39	XML 文件	2 KB
 Factbook.xml	2015/7/29 17:39	XML 文件	1,949 KB
 FootballStatistics.xml	2015/7/29 17:39	XML 文件	1,033 KB
 示例.rpx	2015/9/29 9:02	RPX 文件	3 KB
 销售订单_单记录打印.xml	2015/9/29 9:02	XML 文件	14 KB

3. 设置数据集

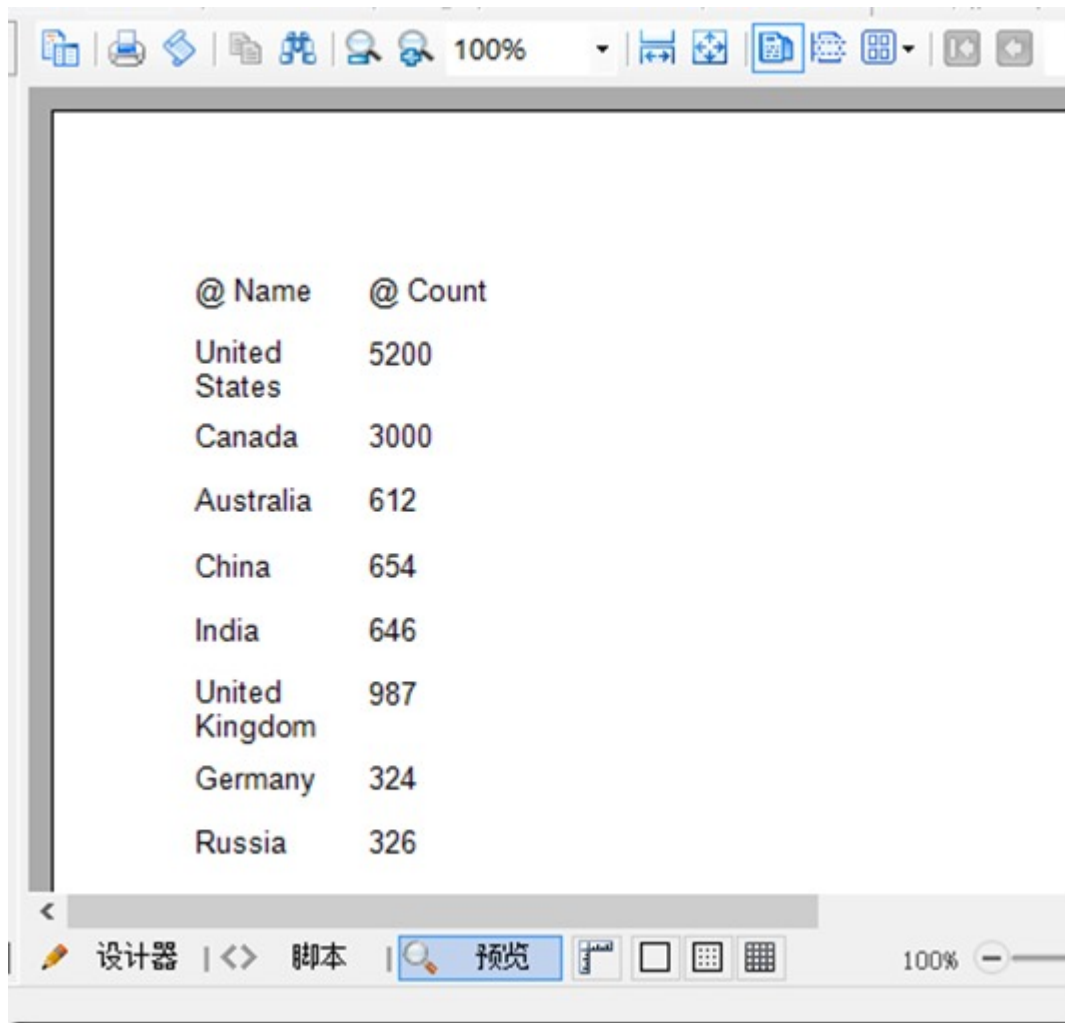

4. 数据集的结构和加载完成的效果

<CallSource>

```
<Country Name="United States" Count="5200"/>
<Country Name="Canada" Count="3000"/>
<Country Name="Australia" Count="612"/>
<Country Name="China" Count="654"/>
<Country Name="India" Count="646"/>
<Country Name="United Kingdom" Count="987"/>
<Country Name="Germany" Count="324"/>
<Country Name="Russia" Count="326"/>
<Country Name="Japan" Count="1322"/>
<Country Name="Austria" Count="213"/>
<Country Name="South Africa" Count="622"/>
<Country Name="Brazil" Count="321"/>
<Country Name="South Korea" Count="21"/>
<Country Name="Argentina" Count="213"/>
<Country Name="Spain" Count="321"/>
<Country Name="France" Count="564"/>
<Country Name="Italy" Count="216"/>
<Country Name="Ireland" Count="135"/>
```

5. 运行效果

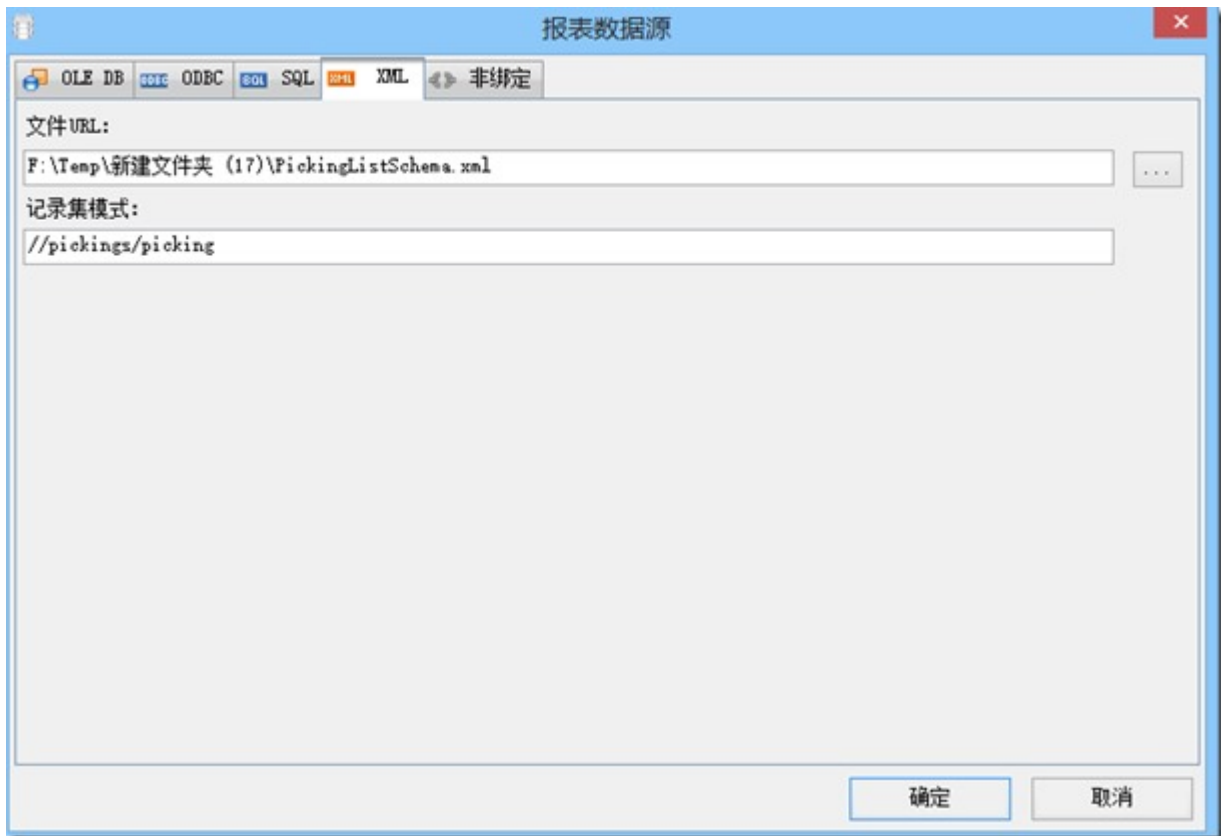

The screenshot shows a software window with a toolbar at the top and a bottom status bar. The main area displays a table with two columns: '@ Name' and '@ Count'. The table lists countries and their corresponding counts. The bottom status bar includes tabs for '设计器' (Designer), '<>' (Compare), '脚本' (Script), and '预览' (Preview), which is currently selected. There are also icons for different view modes and a zoom slider set to 100%.

@ Name	@ Count
United States	5200
Canada	3000
Australia	612
China	654
India	646
United Kingdom	987
Germany	324
Russia	326

区域报表

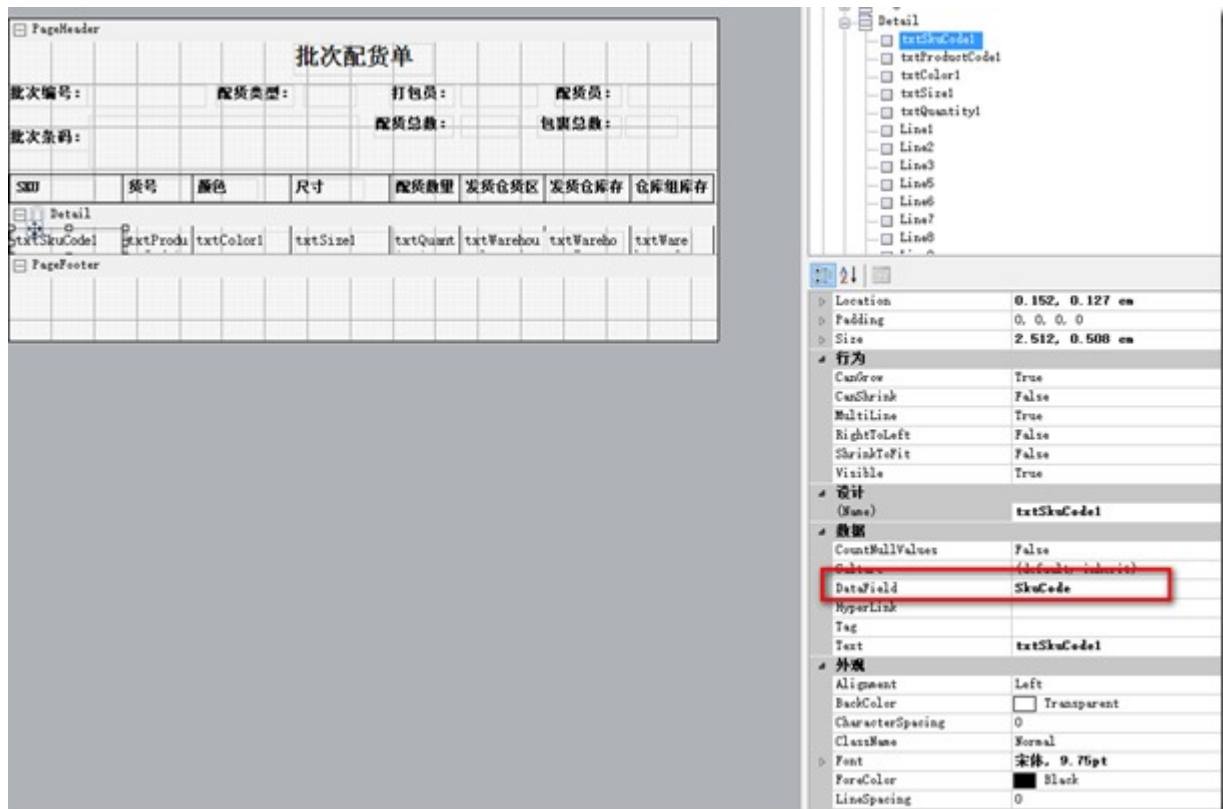

1. 设置数据源

2. 数据源加载完成后，会以树形图显示

3. 将数据字段绑定到TextBox

4. 运行效果:
