

使用 Formula 规则

Formula 规则可以让你使用公式来检查单元格的条件。

示例代码

以下代码创建了 Formula 规则。

JavaScript

```
var style = new GC.Spread.Sheets.Style();
style.backgroundColor = "red";
var ranges = [new GC.Spread.Sheets.Range(0, 0, 2, 1)];
activeSheet.conditionalFormats.addFormulaRule("=A1=B1+C1", style,
ranges);
activeSheet.setValue(0, 0, 2,3);
activeSheet.setValue(0, 1, 1,3);
activeSheet.setValue(0, 2,1,3);
activeSheet.setValue(1, 0, 1,3);
// OR
var style = new GC.Spread.Sheets.Style();
style.backgroundColor = "red";
var rule = new
GC.Spread.Sheets.ConditionalFormatting.NormalConditionRule();
rule.ruleType(GC.Spread.Sheets.ConditionalFormatting.RuleType.FormulaRule);
rule.formula("=A1=B1+C1");
rule.ranges([new GC.Spread.Sheets.Range(0, 0, 2, 1)]);
rule.style(style);
activeSheet.conditionalFormats.addRule(rule);
activeSheet.setValue(0, 0, 2,3);
activeSheet.setValue(0, 1, 1,3);
activeSheet.setValue(0, 2,1,3);
activeSheet.setValue(1, 0, 1,3);
```
