

允许文字溢出

你可以使用 `options.allowCellOverflow` 属性来设置当单元格中的文字的长度较长时，是否溢出到相邻的单元格中。

	A	B	C	D	E	F
1				Data overflows to the right		
2		Data overflows to the left and right				
3		Data overflows to the left				
4						
5						
6						

示例代码

以下代码设置了单元格的对齐方式，并且也设置了允许单元格溢出。

JavaScript

```
activeSheet.options.allowCellOverflow = true;
activeSheet.getCell(0, 3,
GC.Spread.Sheets.SheetArea.viewport).hAlign(GC.Spread.Sheets.HorizontalAlign.left);
activeSheet.getCell(1, 3,
GC.Spread.Sheets.SheetArea.viewport).hAlign(GC.Spread.Sheets.HorizontalAlign.center);
activeSheet.getCell(2, 3,
GC.Spread.Sheets.SheetArea.viewport).hAlign(GC.Spread.Sheets.HorizontalAlign.right);
activeSheet.getCell(3, 3,
GC.Spread.Sheets.SheetArea.viewport).hAlign(GC.Spread.Sheets.HorizontalAlign.general);
activeSheet.getCell(0, 3, GC.Spread.Sheets.SheetArea.viewport).text("Data overflows to the right");
activeSheet.getCell(1, 3, GC.Spread.Sheets.SheetArea.viewport).text("Data overflows to the left and right");
activeSheet.getCell(2, 3, GC.Spread.Sheets.SheetArea.viewport).text("Data overflows to the left");
```
