

使用 Specific Text 规则

Specific Text 规则用于查找单元格中的字符串。

	A	B
1	testing	
2	test	
3	a	
4	t	

示例代码

以下代码使用了 Specific Text 规则。

JavaScript

```
var style = new GC.Spread.Sheets.Style();
style.backColor = "red";
var ranges=[new GC.Spread.Sheets.Range(0,0,10,1)];
activeSheet.conditionalFormats.addSpecificTextRule(GC.Spread.Sheets.ConditionalFormatting.TextComparisonOperators.Contains, "test", style, ranges);
activeSheet.setValue(0, 0, "testing");
activeSheet.setValue(1, 0, "test");
activeSheet.setValue(2, 0, "a");
activeSheet.setValue(3, 0, "t");
```

设置样式

addSpecificTextRule Method
TextComparisonOperators Enumeration
NormalConditionRule class
