

React—自定义打印按钮

1. 内容概述

本节主要为您介绍React框架中自定义打印按钮

2. 具体实现

自定义打印API

```
/***
 * Prints currently displayed report.
 *
 * ````javascript
 * viewer.print();
 * ````
 */
print(): void;
```

React页面具体实现代码

```
import React, {Fragment} from "react";
import "@grapecity/activereports-localization-zh";
import ReactDOM from "react-dom";
import {Viewer as ReportViewer} from "@grapecity/activereports-react";
import "@grapecity/activereports-localization";

function App() {
    const viewer = React.useRef();

    //
    function print() {
        viewer.current.print();
    }
    return (
        <Fragment>
            <div style={{padding: "10px"}}>
                <button onClick={print}></button>
            </div>
            <div id="viewer-host" style={{height: "800px"}}>
                <ReportViewer report={
                    {
                        Uri: "reports/p-report.rdlx-json",
                        Params: {"P1": "1"}
                    }
                } ref={viewer} language={"zh"} />
            </div>
        </Fragment>
    );
}

ReactDOM.render(<App/>, document.getElementById("root"));
```

3. 实现效果

localhost:3000

打印

三

搜索

表格

post_id	id	name	email
1	1	Id labore ex et quam laborum	Eliseo@gardner.biz

4. demo附件下载
